What is claimed is:

- 1. A truck mounted rotating broom system comprising:
 - a rotating broom mounting and control assembly;
 - a support structure mounted to the truck; and
 - a non-rigid connection therebetween
- 2. The truck mounted rotating broom system as defined in claim 1 wherein said support structure includes:
 - a substantially stationary gooseneck assembly; and
 - a swinging trunnion assembly rotatably connected to said substantially
- 5 stationary gooseneck assembly.
 - 3. The truck mounted rotating broom system as defined in claim 1 wherein said non-rigid connection includes a floating beam and a four bar connection between said swinging trunnion assembly and said floating beam.
 - 4. A truck mounted rotating broom system comprising: a support structure including:
 - a substantially stationary gooseneck assembly constructed and arranged to mount to the front of the truck; and
 - a swinging trunnion assembly constructed and arranged for rotatable connection to said substantially stationary gooseneck assembly; means for controlling the position of said swinging trunnion assembly

a non-rigid connection including a floating beam assembly; and a broom positioning, supporting, and rotating assembly connected to said floating beam assembly.

- 5. The system as defined in claim 1 wherein said non-rigid connection includes a multiple link attachment mechanism.
- 6. The mounting assembly as defined in claim 1 wherein said rotating 2 mounting and control assembly includes:

a substantially horizontal beam including a left portion, a right portion, 4 and a central portion;

a first caster assembly constructed and arranged for mounting to said left portion of said substantially horizontal beam;

a second caster assembly constructed and arranged for mounting to said right portion of said substantially horizontal beam;

a first pivot arm assembly connected to the left end of said substantially horizontal beam;

a second pivot arm assembly connected to the right end of said 12 substantially horizontal beam;

means for mounting said non-rigid connection to said substantially horizontal beam; and

means for providing rotational power to the rotating broom.

Patent Application Applicant: John Conaway Rush, Sr., et al Attorney Docket No.: 12544.0107

7. A system for removing snow from a paved surface, comprising: a truck; a rotating broom system mounted to the front of said truck; said rotating broom system including:

a positioning, supporting, and rotating assembly for a rotating

5 broom;

a support structure mounted to said truck; and

a non-rigid connection between said positioning, supporting, and rotating assembly and said support structure.
